Applications

Assembly

Our assembly robotic solutions offer a wide range of flexible high-speed and precision operations.

Palletizing

SEI Automation offers a broad-range of robots specifically designed for layer-forming, palletizing/depalletizing applications.

Dispensing

Our flexible, high-performance dispensing stations cover a wide range of applications: micro-dispensing, potting applications, two component mixing, etc.

Pick and Place

Our integrated packaging solutions are designed specifically around industry-specific requirements and are accompanied by application enabling software and vision capabilities.

Visual Inspection

User friendly programming functions such as vision recognition, positioning, image enhancement, bar code identification and so on.

Screwdriving

Several configurations are available in our automated fastening system range, such as: 4 axis robot, XYZ robot, collaborative station and customized applications.
